NUTSERT GUNS

A rivet nut, also known as a blind rivet nut, or rivnut is a one-piece internally threaded and counterbored tubular rivet that can be anchored entirely from one side. It is a kind of threaded insert. Rivet nuts are an ideal replacement for weld nuts because they will not distort base materials, eliminate weld splatter, toxic fumes, and other by-products of the welding process, and can be installed in many different kinds of material including steel, plastic, composites, and fibreglass.

SP69010

NUTSERT GUN - LEVER TYPE

- Sets 3, 4, 5 & 6mm rivet nuts
- Easy change mandrels
- Single or two hand operation
- Light weight cast aluminium construction
- 250mm long

RIVETERS

A rivet is a permanent mechanical fastener. On installation, the rivet is placed in a punched or drilled hole, and the tail is upset, or bucked (i.e., deformed), so that it expands to about 1.5 times the original shaft diameter, holding the rivet in place. A rivet requires a tool that keeps the hat of the rivet firmly pressed against the installation surface while simultaneously pulling the mandrel away from it.
Types of Rivet Guns include:
• Hand • Lever • Lattice • Battery • Pneumatic
